

Good Morning,

Please be advised that the landscaping company has started putting pesticides down on the lawns in efforts to **control various pests and disease carriers**, such as mosquitoes, ticks, rats and mice. Pesticides are used in agriculture to control weeds, insect infestation and diseases. There are many different types of pesticides; each is meant to be effective against specific pests. Many residents have asked about the different types of pesticides that can be used that are pet friendly. Based on experience of our landscaping company- the type of pesticide best suited for Del Webb and our efforts to keep our property beautiful will require not walking on or using the grass area where pesticides are for 48-72 hours after application. After review of our landscaping contract, we will only receive the application every two months- so now not again until mid June. Alternatively- please use the road ways and other areas where pesticides are not present for pet use.

We appreciate your attention to this matter.
